

ABORTED FETAL CELL LINE PRODUCTS				IRELAND February 2009 – Ethical Alternatives		
Disease	Product Name	Manufacturer	Cell Line Fetal	Ethical Version	Manufacturer	Cell Line
Chickenpox	Varivax	Sanofi Pasteur	WI-38, MRC-5	None	N/A	N/A
Hepatitis A	Avaxim Havrix	Sanofi Pasteur GSK	MRC-5 MRC-5	Aimmungen Not available in Ireland	Kaketsuken (Japan & Europe)	Vero (monkey)
Hepatitis A & B	Twinrix	GSK	MRC-5	N/A	N/A	N/A
Hepatitis A & Typhoid	Viatim	GSK		N/A	N/A	
Hepatitis B only	None	none	none	Engerix-B Hepatect HBVAXPRO	GSK IntraPharma Sanofi –Pasteur.	Yeast Yeast Yeast
Measles, Mumps, Rubella	Priorix	GSK	RA273, WI-38	None	N/A	N/A
Measles-Rubella	MR VAX	n/a in ROI	RA273, WI-38	Attenuvax (measles) N/A	Merck	Chick embryo
Mumps-Rubella	Biavax II	n/a in ROI	RA273, WI-38	Mumpsavax N/A	Merck	Chick embryo
Rubella	Meruvax II	n/a in ROI	RA273, WI-38	Takahashi Not available in Ireland	Kitasato Institute (Japan & Europe)	Rabbit
MMR + Chickenpox	ProQuad	Licensed in EU	RA273, WI-38, MRC-5	None	N/A	N/A
Polio	Imovax	n/a in ROI	MRC-5	Poliovax	Sanofi Pasteur	Vero (monkey)
(DTaP + polio) DTaP /HIB/Polio	Pentacel	n/a in ROI	MRC-5	Revaxis/Tetravac/Pentavax Infanrix-IPV-HIB	Sanofi-Pasteur GSK	Vero (monkey)
Rabies	Rabies vaccine	Sanofi Pasteur	MRC-5	Rabipur	Chiron	Chick embryo
Rheumatoid/ OsteoArthritis	Enbrel	Wyeth	WI-26 VA4	Humira	Abbott Labs	CH Hamster Ovary
Sepsis	Xigris	Eli Lilly	HEK-293	Ask your doctor	N/A	N/A
Shingles	Zostavax	Licensed in EU	WI-38, MRC-5	None	N/A	N/A
New: Smallpox	Acambis 1000	N/A	MRC-5	ACAM2000 MVA3000	N/A	Vero (monkey) Chick embryo
Under Development Ebola	TBA	Crucell/NIH	PER C6	None	N/A	N/A
Under Development :Flu, Avian Flu	TBA	MedImmune Vaxin, Sanofi	PER C6, HEK-293	FluVirin, Flu Shield, Flumist, FluZone, FluBlok	Chiron, Medimmune, Sanofi, Protein Science	Chick embryo Caterpillar
Under Development: HIV	MRKAd5HIV-1	Merck	PER C6	None	N/A	N/A

Note: Immune-Globulin shots will provide temporary immunity (4-6 months) for Hepatitis-A and Rubella (3 months)

NOTE: ALL CURRENT FLU VACCINES USE ETHICAL CELL LINES.
VACCINES NOT LISTED HERE DO NOT USE ABORTED FOETAL CELL LINES.

Current Trends

Because the pharmaceutical industry perceives public acceptance of the current vaccines, they continue to utilize both existing and new aborted fetal sources for vaccine development. The latest is a new fetal cell line, PER C6, created by Dutch pharmaceutical, Crucell, NV. This cell line uses the retinal tissue of an 18-week gestation aborted baby.

A Choice – And A Moral Duty!

Similar to adult stem cell therapies, which are viable alternatives to using destroyed human embryos, vaccines can be made using ethical sources. Instead, the present tainted vaccines have been used to justify further immoral research. In Aug., 2001 President Bush rationalized funding embryonic stem cell research by using the chickenpox vaccine as a precedent, since the embryos, like the aborted babies, had already been destroyed. But in both cases, human beings were intentionally and callously slaughtered for research purposes. Unless the public refuses to tolerate this exploitation of our unborn, it will only worsen. We were successful with our smallpox campaign by demanding an ethical alternative and we must continue this sort of pressure. In a recent Vatican document, our moral duty to do just that was made abundantly clear:

“Doctors and fathers of families have a duty to take recourse to alternative vaccines...putting pressure on the political authorities and health systems so that other vaccines without moral problems become available. They should take recourse, if necessary, to the use of conscientious objection with regard to the use of vaccines produced by means of cell lines of aborted human foetal origin. Equally, they should oppose by all means in writing, through the various associations, mass media, etc., the vaccines which do not yet have morally acceptable alternatives, creating pressure so that alternative vaccines are prepared, which are not connected with the abortion of a human foetus, and requesting rigorous legal control of the pharmaceutical industry producers.” (PAFL, June 2005)

How Can You Help?

- Ask your doctor to supply the existing ethical alternatives
- Support our FLICA legislation which demands fair labeling and informed choice on medical products using aborted fetal or embryonic cell lines
- Get the word out – let the Pharmaceutical Companies know how you feel - and join

The Campaign For Ethical Vaccines

To read about our legislation, obtain copies of our petition or for further information, visit our website:

VACCINES FROM ABORTION THE HIDDEN TRUTH

For over thirty years pharmaceutical companies have been quietly producing vaccines using the remains of aborted babies, a fact that was deliberately hidden from the general public for decades. But as the grisly details emerged through several pro-life publications, a growing number of parents and physicians were both shocked and deeply disturbed to discover the truth surrounding these vaccines – and rightfully so! What follows is just the tip of the iceberg!

During the 1964 Rubella epidemic some doctors advised rubella-infected pregnant women to abort their children, based on the fear their child might be born with birth defects. Working along side these doctors, researchers collected the live fetal tissue. Ultimately, they extracted the virus from the 27th aborted baby's kidney, labeling it RA273. (R=Rubella, A=Abortus, 27=27th abortion in the study, 3=3rd tissue explanted) This virus was then cultivated on WI-38 (Wistar Institute No. 38) a cell line produced from the lung tissue of a 3 months gestation female baby, electively aborted in Sweden. But prior to perfecting WI-38, there were numerous other abortions involved in the research. Ultimately, scientists documented at least 61 elective abortions to produce the rubella vaccine alone.

Following the US lead, 10 years later scientists in the UK developed MRC-5, taken from the lung tissue of a male baby aborted at 14 weeks gestation. These two fetal cell lines are used to continuously cultivate the weakened virus strains of several diseases to produce vaccines.
